Supervisor:

Dr. Kumbesan Sandrasegaran

Associate Professor,

Faculty of Engineering and Information Technology,

Centre for Real Time Information Networks,

University of Technology Sydney

Certificate of Originality

I certify that the work in this thesis has not previously been submitted for a degree nor has it been submitted as part of requirements for a degree except as fully acknowledged within the text.

I certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Signature of Candidate

Acknowledgement

I would like to thank Dr. Kumbesan Sandrasegaran, my supervisor, for the great support in both general and academic aspects he has given me throughout the years since my first semester at UTS in Master of Engineering Studies in Autumn 2005.

I would like to thank my friends in CRIN laboratory who reviewed drafts of my work and discussed some technical aspects.

Lastly, I would like to give grateful thanks to my parents, Ampol and Sunee, who support and encourage me to achieve as high education as I can, and my sister Rasana who helps me while studying in Australia.

Abstract

Link adaptation technique (LAT) is one of the radio resource management (RRM) functions necessary for future wireless network to enhance the system capacity and provide an adequate quality of service to the end users.

LAT requires knowledge of users' received signal-to-noise ratio so that scheduling and adaptive modulation and coding scheme (MCS) can be performed to optimise the system performance. The received SNR is measured by the mobile users in the downlink transmission and converted to channel state information (CSI), which is sent via feedback channel in the uplink direction to the base station. The amount of feedback required for adaptive MCS and scheduling at the BS increases with the number of users which consumes significant amount of system resources. It is critical to provide an efficient feedback algorithm for LAT to achieve high utilisation of the system resources while maintaining the system performance close to the system with perfect knowledge of CSI.

This thesis attempted to answer the following questions related to LAT with reduced CSI feedback load:

- a) Based on our current knowledge of feedback reduction techniques, can the feedback load be further reduced without sacrificing the system performance?
- b) Do multiple threshold schemes perform better than single threshold schemes?
- c) How is it possible to develop a feedback technique(s) that can self-adjust the parameters associated with CSI reporting to suit the system conditions?
- d) Provided that a well-known scheduling technique creates significant delays in the scheduling process, is it possible to mitigate the delays without any need for additional feedback resources?
- e) Based on our current knowledge of CSI transmission on the uplink, can a more efficient media access control scheme for CSI reporting be developed?

Table of Contents

Chapter 1 Introduction

1.1. Brief History of Cellular Systems	1
1.2. Overview of Link Adaptation Techniques in Wireless Networks	3
1.2.1 Power Control and Rate Control.....	5
1.2.2 Multiuser Diversity and Opportunistic Scheduling	6
1.2.3 Channel State Information	8
1.2.4 Hybrid Automatic Repeat-Request	9
1.3 Problem Statements and Research Objectives	10
1.4 Outline and Contributions	11

Chapter 2 Backgrounds

2.1 LTE Architecture	15
2.2 LTE Physical Layer - OFDMA	16
2.3 Adaptive Modulation and Coding Scheme	17
2.4 Maximum Throughput and Proportional Fair Scheduling	21
2.5 CSI Feedback for Link Adaptation	22
2.6 Radio Resource Management Functions	26
2.7 System Modeling	27
2.7.1 Channel Model.....	27
2.7.2 Data Rate.....	28
2.7.3 Scheduling Algorithms	31
2.7.4 Feedback Scheme	32
2.7.5 Network Load	33
2.8 Summary	33

Chapter 3 Link Adaptation with Reduced Feedback

3.1 Introduction	34
3.2 Overview of Feedback Reduction Techniques	35
3.2.1 Gesbert's Selective Feedback	36

3.2.2	One-bit feedback.....	37
3.2.3	Kim's Feedback Reduction.....	38
3.2.4	Floren's Feedback Reduction	39
3.2.5	Holter's Feedback Reduction.....	39
3.3	Effect of Feedback Threshold	40
3.3.1	Gesbert's Selective Feedback	40
3.3.2	One-bit Feedback.....	42
3.4	Selective Feedback Using Relative SNR.....	44
3.4.1	Gesbert's Selective Feedback Using Relative SNR	44
3.4.2	One-Bit Feedback Using Relative SNR.....	46
3.5	Proposed Feedback Algorithm	47
3.5.1	Graphical Representation of Proposed Feedback Algorithm.....	48
3.5.2	Mathematical Representation of Proposed Feedback Algorithm	49
3.5.3	Determining an Optimal Value for δ_{max}	50
3.6	Simulation Results	53
3.6.1	Achievable Net Throughput.....	56
3.6.2	Achievable Net throughput with Optimal Feedback Threshold	57
3.6.3	Feedback Load	59
3.6.4	MCS Update Error Probability	61
3.7	Summary.....	62

Chapter 4 Link Adaptation with Multiple Feedback Thresholds

4.1	Overview of Feedback Techniques with Multiple Thresholds	63
4.1.1	Hassenl's Multiple Feedback Thresholds Technique	63
4.1.2	Nam's Multiple Feedback Thresholds Technique	64
4.1.3	So's Multiple Feedback Thresholds Technique.....	64
4.2	Achievable Throughput with Single Feedback Threshold.....	64
4.3	Achievable Throughput with Multiple Feedback Thresholds.....	68
4.4	Numerical Results	71
4.4.1	Performance with Two Feedback Thresholds	74
4.5	Analysis of Suboptimal Feedback Thresholds	79
4.5.1	Suboptimal case for System with Single Feedback Threshold.....	80

4.5.2 Suboptimal case for System with Two Feedback Thresholds	83
4.6 Summary	86

Chapter 5 Automatic Feedback Threshold Setting and Hybrid Scheduling Technique

5.1 Automatic Feedback Threshold Setting.....	87
5.1.1 Overview of Feedback Threshold Adjustment Techniques.....	87
5.1.2 Proposed Automatic Feedback Threshold Adjustment Technique..	88
5.1.3 Selection of parameter $\Delta\gamma_{up}$	91
5.1.4 Selection of parameter $\Delta\gamma_{dw}$	92
5.2 Performance of Proposed Feedback Reduction Technique	92
5.2.1 Sum Rate Performance	93
5.2.2 Feedback Load and Feedback Outage Performance	94
5.2.3 Value of Automatically Adjusted Feedback Threshold.....	95
5.2.4 Fairness Performance.....	96
5.3 Hybrid Scheduling Policy with Reduced Feedback.....	96
5.3.1 Scheduling Delay Problem with PF Scheduling.....	97
5.3.2 Overview of Delay-Aware Scheduling Algorithms.....	98
5.3.3 Hybrid Scheduling with Reduced Feedback.....	101
5.3.4 Determining Optimal Feedback Threshold for Hybrid PFS-FIFO	103
5.4 Performance of Hybrid PFS-FIFO.....	106
5.5 Performance of Exponential Rule in Heavily Loaded Networks.....	109
5.6 Implementation Issue.....	113
5.7 Summary	113

Chapter 6 Adaptive Feedback for OFDMA Systems

6.1 Introduction.....	115
6.2 Overview of Feedback Reduction for OFDMA Systems	117
6.2.1 Best M Feedback	118
6.2.2 One-Bit Feedback Reduction.....	120
6.2.3 Average Best M Feedback	120
6.3 Proposed Adaptive Feedback Reduction Technique	122
6.3.1 CSI Reporting Scheme.....	123

6.3.2 MCS with Reconstruction of SNR from ACK/NACK.....	125
6.4 Simulation Descriptions.....	126
6.5 Simulation Results	129
6.6 Summary	137

Chapter 7 Opportunistic Contention-based Feedback for OFDMA

7.1 Overview of Contention-based Feedback Techniques.....	138
7.2 Proposed Contention-based Feedback Protocol	139
7.3 Simulation Description	144
7.4 Simulation Results	145
7.4.1 Performance of RT Users	145
7.4.2 Performance of NRT Users.....	146
7.5 Summary	152

Chapter 8 Conclusion and Future Work

8.1 Conclusions.....	153
8.2 Future Work.....	155

References	157
